

## **City of Red Deer Council Chamber Red Deer, Alberta 2006**

The City of Red Deer Council Chamber has existed for a number of years operating with an existing sound system. As such, our Calgary office was hired to remove the old system and replace it with a new 21-seat delegate conference system, complete with PC management and request to speak queuing. As this space is also used for functions such as Planning Commission and Assessment Review Control Board hearings, it was important that the system be intuitive in operation and flexible enough to accommodate these different users groups. To accommodate these needs, our programmers were able to provide users a two (2) stage log-in and virtual keyboard allowing the users to access only the portions of the system pertinent to them. This system was completed in October 2005.
