

## Channel M Vancouver, British Columbia

Channel M broadcasts to three million residents in the lower mainland and Vancouver Island. Its signal is broadcast on Cable 8 Vancouver and Cable 10 Victoria, and is also distributed by Bell ExpressVu on Channel 254. Channel M does in-house productions and works with independent producers to develop new programs to create 55 hours per week of local programming. Their schedule features multilingual news, entertainment and lifestyles programming; international movies with English subtitles; as well as English language “classics” and hit shows.

Channel M was built as an SDI plant with separate (non-embedded) AES audio. Due to the relatively small size of the Channel M studios, a For-A virtual set was utilized, along with the Radamec robotics. Another new innovation was the Miranda K2 virtual monitor wall in the production control facility.

### System Solution:

- (2) Grass Valley Profile XP
- (2) Grass Valley Vibrant for New Edit Suite
- (1) For-A Virtual Set
- (3) Radamec Robotics
- Sony Cameras, Production Switcher and Tape Format
- ENPS Software for News Edit Suite
- Master Control is Harris Automation with a Grass Valley 2100 Master Control Switcher
