

## Regional Municipality of Waterloo Kitchener, Ontario 2006

In spring of 2006, the Region of Waterloo upgraded their existing Audio System with a fully integrated Digital Delegate System (DIS). The existing acoustics and design of this building made the integration of any audio system a challenge; however the solution that AEL provided resolved all issues that had existed in this chamber since it was built in 1995. The system consisted of 15 delegate stations and 30 department head positions. The overall system is controlled jointly by the DIS software and a Crestron control system.
