

### **Rogers Wireless Toronto, Ontario**

The administrative offices for Rogers Wireless Division moved into a new location at 350 Bloor Street in July 2007. Applied Electronics was contracted to remove the A/V equipment from the existing executive boardroom location in North York and re-design an updated system for the new Bloor office.

The new boardroom utilizes two large 65" plasma screens for multimedia presentations and vide conferencing. The room is fully automated with a Crestron control system including a large 12" screen touch panel for simplified operation. Applied Electronics worked closed with the facility designer and architect to provide a clean modern look for this new meeting space.
